Vlastnosti určitého integrálu

1) Necht $f_1(x)$ a $f_2(x)$ jsou funkce spojitě
v určitém intervalu I a a a b necht
jsou body z tohoto intervalu a c_1 a c_2 reálné
konstanty. Pak platí:

$$\int_a^b (c_1 f_1(x) + c_2 f_2(x)) dx = c_1 \int_a^b f_1(x) dx + c_2 \int_a^b f_2(x) dx$$

2)
$$\int_a^b f(x) dx = - \int_b^a f(x) dx$$

3) Jestliže $f(x)$ a $g(x)$ spojité funkce v
intervalu $\langle a, b \rangle$ a je-li $f(x) \geq g(x)$ pro
každé $x \in \langle a, b \rangle$, pak $\int_a^b f(x) dx \geq \int_a^b g(x) dx$.

(na výhled absolutní plochy)

4) (aditivnost urađeno integralu)

Je-li f a $f(x)$ spojita u intervalu I , který
obsahuje libovolně položené body \underline{a} , \underline{b} , \underline{c} , pak

$$\int_a^b f(x) dx = \int_a^c f(x) dx + \int_c^b f(x) dx.$$

5) $\int_a^a f(x) dx = 0$
